	Inventive step (IS)	Claims		YES				
		Claims	1-18	NO				
	Industrial applicability (IA)	Claims	1-18	YES				
		Claims		NO				

2. Citations and explanations

1. PCT Article 33(2)

The subject matter of claims 1-18 is novel since the prior art (D1 to D3) does not describe a flame-retardant and stabiliser combination containing melamine **poly**phosphate, or the use thereof in plastics moulding compositions.

2. PCT Article 33(3)

D1 can be regarded as the closest prior art (similar arguments can reached proceeding from D2); the present application differs therefrom by virtue of the use of melamine polyphosphate in the flame-retardant and stabiliser combination. This feature is intended to increase the thermal stability of the polymer moulding compounds but is unsupported (relative to D1 or D2) by experimental evidence. The technical problem can therefore be regarded as that of providing alternative flame-retardant and stabiliser combinations. For a person skilled in the art, varying the melamine component appears to be an obvious solution to the problem and, in consequence, an inventive step (still) cannot be acknowledged.
